THE TAP FACTORY

THE TAP FACTORY

FACT:
Both tap water and bottled water are drawn from groundwater

DIFFERENCE:
Bottled water is untreated whereas tap water is inspected and has to meet government standards. It is then chlorinated to ensure safe delivery to your home.

SOLUTION:
Filter out the chlorine and any sediment from your mains supply and improve the taste by installing a **K2H2O** water filter before your tap.

DID YOU KNOW?
13 billion plastic bottles are used in the UK every year. Only half are recycled. That is 15 million PER DAY not recycled and of those 700,000 PER DAY are littered. Plastic bottles make up nearly 1/3 of plastic waste in the oceans

We recommend you use a reusable cup or sports bottle for water from this filter

- your cups/containers
- your use of plastic bottles
- the filter in this housing

K2H2O

Easy to Install in 4 simple steps:

- 1) Turn off the cold water supply and disconnect the cold water tap tail from the supply line
- 2) Install the filter diverter valve between the incoming cold water supply and the cold water tap tail
- 3) Install the filter to the cold water filter diverter valve, making sure that the direction of flow matches the arrows on the filter head.
- 4) Turn the cold water supply back on and flush the cold water through the tap for 30 seconds

Now you're ready to enjoy as much filtered water directly from you tap as you wish, at a fraction of the cost of bottled water.
